

The DS-100C uses USB hardware and software drivers from FTDI Chip.

Please follow the driver installation instructions matching your operating system found in the “Drivers” folder provided with IVPC3. Note: These instructions are for the generic FTDI product drivers and therefore do not reference Daystar products.

Note: Due to product ID number changes, the operating system generates a warning during installation similar to the warning shown below. Choose the option to ignore this warning and install the driver.
